How to do the Bird Count

IT'S AS EASY AS 1, 2, 3!

- **1. Plan to count birds for at least 15 minutes.** You can do it in different places. Just be sure to keep a separate list of birds for each location.
- **2.** For each type of bird you see, count the most you see at any one time. For example, maybe you see two chickadees when you start watching, then five chickadees a few minutes later. The number you put on your list for chickadees is five. Do **not** add two plus five. (This way you don't accidentally count the same bird twice.)

| Weather conditions for detecting birds in the habitats visited were: |
|---|
| POOR FAIR GOOD EXCELLENT |
| |
| Habitat(s) (Check all that apply): |
| Deciduous Woods Scrub Grassland |
| Freshwater Rural Suburban |
| Bird Counts |
| Please write the highest number of birds of each species that you saw together at |
| any one time. For example, if you watched a flock of Dark-eyed Juncos for 15 |
| minutes and saw 3 juncos at a feeder, then 5, then 2, you would report 5, the |
| highest number your saw at once, next to the name, "Dark-eyed Junco." Do not add |

the numbers together (not 3 + 5 + 2). Check a field guide if you need help with identification. If you still cannot identify the species, do not report it.

| SPECIES | HIGHEST NUMBER COUNTED |
